flacc = flow accumulation (i.e. river discharge) in mm weighted by mean annual rainfall calculated from NCAR CCSM3 Alb 2080 conditions (millimeter)

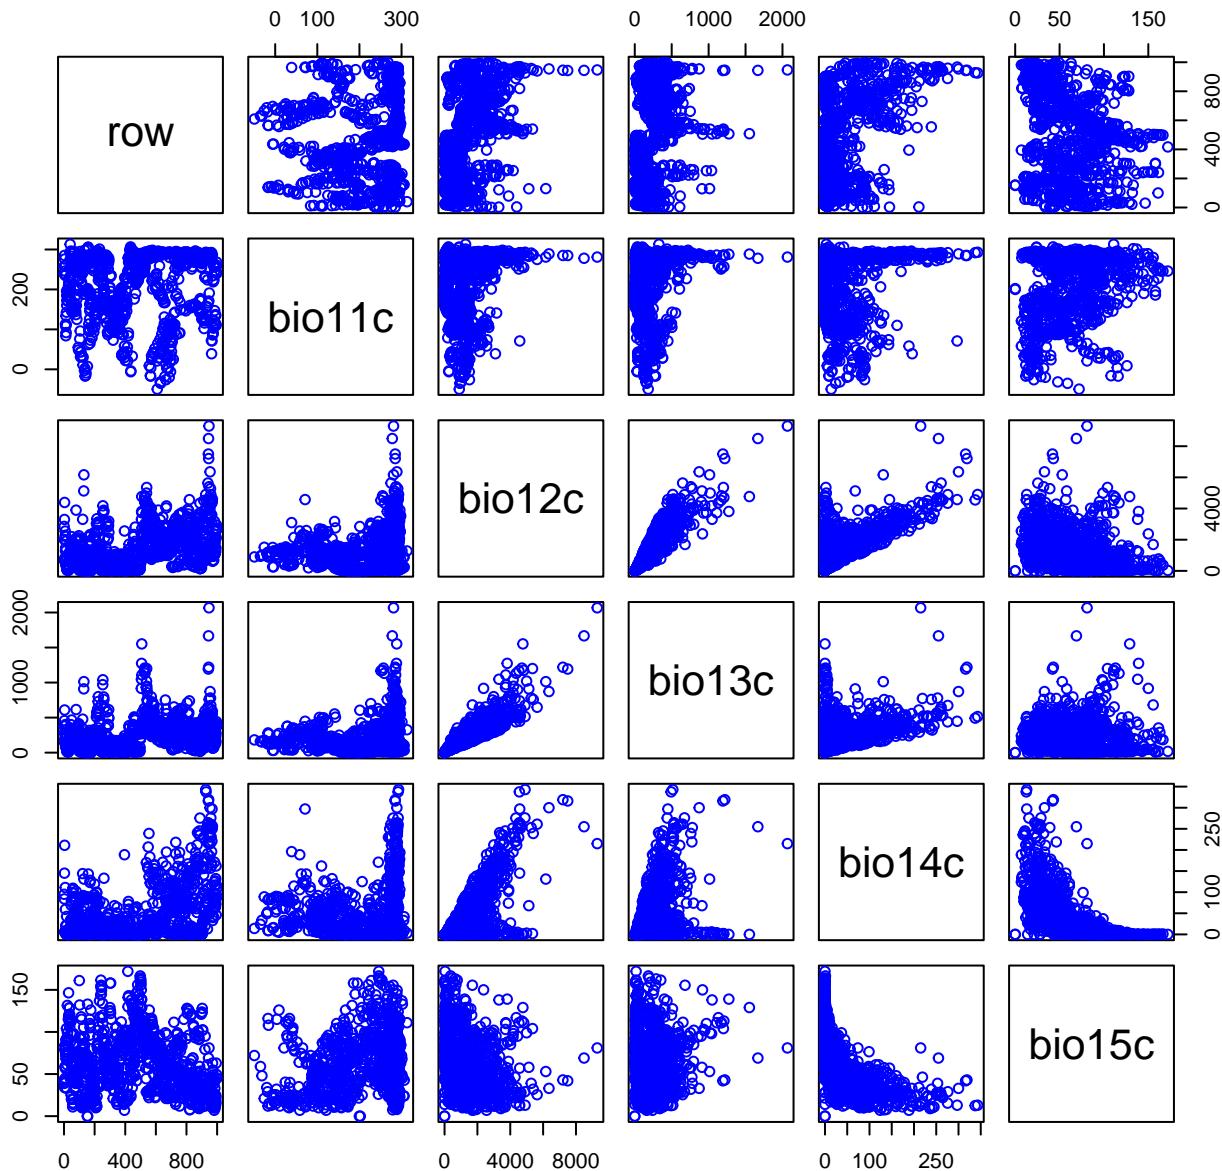

htidesc = horizontal tide estimated by dividing vertical tidal amplitude by slope, where vertical tides were obtained by summing the primary tidal amplitude constituents, M2 and K1. Primary tidal amplitude constituents came from the NASA Planetary Geodynamics lab, and slope obtained from global bathymetry and topography digital elevation model (meter)
