

Harvard Forest Data Archive HF162-09

Data File:

Name = hf162-09-stumps.csv

Description = stumps

Rows = 1125 Columns = 8

MD5 checksum = 93ec6d7ca61a9f3bf916aae9ee537656

Variables:

year = year sampled; post-harvest only

diam1 = stump diameter (centimeter)

diam2 = second diameter in cm. measured perpendicular to the first
if possible. Not measured in 2010 (centimeter)

height = stump height; listed as negative for hollows as this is
negative space to be subtracted from the plot volume (meter)

Variable	Min	Median	Mean	Max	NAs
year	2010.000	2012.000	2013.109	2017.000	0
diam1	8.700	33.000	32.614	65.000	18
diam2	6.500	33.300	33.070	64.000	348
height	-0.400	0.200	0.184	2.000	18
