Stonewall with wood rails on the moraine

Ditch and ridge with wood rails on the outwash
Dear Sir,—I have made a poor hand to-day, among the plovers, though I have had a good deal of pleasant driving over the plains. The mode of shooting is from a wagon... My eye is hardly quick enough to see the birds in the grass, and I am a little too much out of play to be sure of them when they rise… My companion to-day Dr. Fisher, a principal man here, is an excellent shot. He killed a dozen birds.

Daniel Webster

In Tisbury, (Middletown) Dr. Daniel Fisher is building a costly dam on one of the ponds in that neighborhood, where he intends to erect a first class flour mill. The pond is already stocked with pickerel and trout, and it is the doctor’s intention to have such a stream of flowing water as will contribute greatly to their development and increase. The dam and mill will be completed during the coming summer.

Vineyard Gazette February 10, 1860

James S. Grinnell. 1883. Annual Report of the Secretary of the Board of Agriculture.

About twenty-five years ago Dr. Daniel Fisher of Edgartown, a man of great enterprise and business capacity, who had acquired a large fortune in the oil business, believing that wheat could be grown and good flour made upon the island, bought some six hundred acres of land lying on one of the largest of these brooks, and built on the line of the brook five heavy, expensive stone dams, making as many capacious reservoirs. At the lower one, in 1860, he built a very fine mill for grinding wheat and bolting flour, containing every appliance known in those days for perfect milling ; and at that time there was not in the United States a more complete mill for making flour. He imported the best wheat grown in Maryland, and for a time made the finest flour known.
The ice houses in this town are now nearly all full. Dr. Fisher has 300 tons; S. P. Coffin, 600; R. E. Norton, 250; Mr. Brownell, Sea View House, 450; Constant Norton, 400. Total, 2000 tons. We learn that a considerable quantity has been secured in Tisbury. The ice is of very good quality and averages about 9 inches thick.

*Vineyard Gazette January 22, 1875*
Dr. Fisher Road

“Another track through this scrub oak wilderness is a half moon known as Doctors Fisher’s Road, built by a gentleman of the name to connect his mill in Tisbury, where water power is to be had, with Edgartown.”  

C.G. Hine 1908

“a fine dirt road when he finished it, over which his four-horse trams could be driven at a gallop”

“Built with permission from each town”  

Vineyard Gazette September 1940

Dr. Fisher’s road, so called, leading from the Sukey Allen Place to Middletown, is undergoing thorough repairs. About seventy men and teams have been on the ground, engaged in the work for several days past.
