

Harvard Forest Data Archive HF002-01

Data File:

Name = hf002-01-control.csv

Description = trees in control plot

Rows = 8657 Columns = 14

MD5 checksum = e2951d976282625c7185c44e289bf44a

Variables:

year = year of measurement

x = cartesian coordinate identifying location within the plot along  
its 50 m axis (note: 0,0 is at northwest corner) (number)

y = cartesian coordinate identifying location within the plot along  
its 120 m axis (note: 0,0 is at northwest corner) (number)

dbh = diameter at breast height in cm (to 0.1 cm). For dead trees,  
dbh typically measured once, then not measured thereafter.  
(centimeter)

Variable	Min	Median	Mean	Max	NAs
year	1990.000	1995.000	1998.475	2015.000	0
x	0.410	24.530	24.759	50.490	0
y	-0.440	61.230	59.778	119.370	0
dbh	4.900	12.500	17.744	65.600	5368
