

Harvard Forest Data Archive HF002-02

Data File:

Name = hf002-02-experiment.csv

Description = trees in experimental plot

Rows = 12275 Columns = 15

MD5 checksum = ed82a160ccb320373b34957f43187cb4

Variables:

year = year of measurement

x = cartesian coordinate identifying location within the plot along
its 50 m axis (note: 0,0 is at northwest corner) (number)

y = cartesian coordinate identifying location within the plot along
its 160 m axis (note: 0,0 is at northwest corner) (number)

dbh = diameter at breast height in cm (to 0.1 cm). For dead trees,
dbh typically measured once, then not measured thereafter.
(centimeter)

Variable	Min	Median	Mean	Max	NAs
year	1990.000	1996.000	2000.062	2015.000	0
x	-0.180	23.870	24.526	50.550	0
y	0.500	85.950	83.178	160.050	0
dbh	4.800	10.500	13.901	81.600	8553
